TV channels

```
GET /api/v2/tv-channels/
```
copy

PARAM	TYPE	DESCRIPTION
`country_code`	string	ISO code, e.g. `AR`
`name`	string	Name search
`limit` / `offset`	int	Pagination

```
GET /api/v2/tv-channels/{id}/
GET /api/v2/tv-channels/{id}/broadcasts/    # what this channel shows — date_from/to,
```
copy

`/tv-channels/{id}/broadcasts/` defaults to the same one-week window as `/broadcasts/` below when you pass neither `date_from` nor `date_to`.

Broadcasts

Which channel shows which match, per country:

```
GET /api/v2/broadcasts/
```
copy

PARAM	TYPE	DESCRIPTION
`event_id`	int	One match
`country_code`	string	Viewer country
`channel_id`	int	One channel
`league_id` / `team_id` / `season_id`	int	Scope
`date_from` / `date_to`	date	Kickoff window
`limit` / `offset`	int	Pagination

Results are ordered by kick-off ascending. If you pass neither `date_from` nor `date_to`, the response is the **upcoming week** — kick-off from 3 hours ago to 7 days out. Setting either bound disables that default, so `date_from` is how you reach past fixtures (`date_from=2000-01-01` gives you the whole archive).

Listings are typically published about a week before kick-off, and rights holders in some markets publish late. A fixture further out than that legitimately has no channel yet, so an empty result for a match next month is expected rather than missing data.

```
# "Where can I watch it?" for one match, for Argentine viewers
curl -H "Authorization: Token YOUR_API_KEY" \
  "https://sports.bzzoiro.com/api/v2/events/223510/broadcasts/?country_code=AR"

# Upcoming Premier League on TV for viewers in the UK
curl -H "Authorization: Token YOUR_API_KEY" \
  "https://sports.bzzoiro.com/api/v2/broadcasts/?country_code=GB&league_id=1&limit=20
```
copy

Social feed

Curated tweets and videos linked to entities:

```
GET /api/v2/social/
```
copy

PARAM	TYPE	DESCRIPTION
`type`	string	`tweet` · `video`
`team_id` / `event_id` / `player_id` / `manager_id`	int	Linked entity
`league_id` / `season_id`	int	Scope
`account_verified`	bool	Only verified accounts
`published_after` / `published_before`	datetime	Time window
`limit` / `offset`	int	Pagination

Also available as per-entity shortcuts: `/events/{id}/social/`, `/teams/{id}/social/`, `/players/{id}/social/`, `/managers/{id}/social/`.

Responses cached ~15 minutes.
